

Revised. 1614

A new Almanacke and  
prognostication, made  
for the yeare of our Lord  
God. 1614.

Being the second from the Bissextile  
or leape-yeare.

Calculated and composed according  
to Art, for the latitude & meridian of  
the honourable Citie of London  
and may very well serve all the  
south parts of great

Britaine.

By Thomas Bretnor Teacher of  
Arithmetike, Geometrie,  
and Astronomie, neere  
Holborne conduit  
in London.

Imprinted at London for the Com-  
pany of Stationers.

**A note of the moueable  
Feasts according to our  
accompt.**

**The reformed or accompt  
begoned the Seas.**

# A note of the Termes and their returnes,

<b>Willarte Terme</b> beginneth the 24 of January & en- deth the 14. of February.	And hath 4 Returnes.	1	Octab. Hillar. Jan. 20
		2	Quind. Hillar. Jan. 27
		3	Craft Purif. Feb. 3
		4	Octab Purif. Feb. 9
<b>Calles Terme</b> beginneth the 11 of May and en- deth the 6. of June.	And hath 5 Returnes.	1	Quind. pasch. May. 9
		2	Tres pasch. May 16
		3	Mens. pasch. May 23
		4	Quinq; pasch. May 30
		5	Craft. ascen. June 3
<b>Trinitie Terme</b> beginneth the 24. of June & endeth the 13. of July.	And hath 4 Returnes.	1	Craft. Trin. June 20
		2	Octab. Trin. June 27
		3	Quind Trin. July 4
		4	Tres Trin. July 11
<b>Michaelmas</b> <b>Terme</b> beginneth the 10. of Octo- ber and endeth the 29 of No- uember.	And hath 8 Returnes.	1	Octab. Mich. Octob. 6
		2	Quind Mich. Octob. 13
		3	Tres Micha. Octob. 20
		4	Mens. Mich. Octob. 27
		5	Craft. anim. Nouemb. 3
		6	Craft. Mart. Nouem. 12
		7	Octab. Mart. Noue. 18
		8	Quind. Mart. Noue. 25

The vacation betweene Trinitie and Michaelmas  
Terme is—12 weekes 5. daies.

A note of the time of the Commencement and Act of  
our 2. famous Uniuersities.

Cambridge—Commencement is alwayes kept vpon the  
next Monday after S. Peters day.

The Vespers vpon the Saturday immediatly before.

Oxford—Act alwaies is kept vpon the next Monday  
after the 7. of July.

The Vespers vpon the Saturday immediatly before.

The Moones government ouer our bodie, as she passeth vnder  
the 12 signes

Aries The head face

rius, the

Legs.

A note of the signification and vse of the Characters placed in  
the 5. and 6. Columns of this Almanacke.

♄ Saturne. ♃ Iupiter. ♀ Mars. ☉ Sol. ♀ Venus. ☿  
Mercury. ☾ The moone.

♈ Aries, ♉ Taurus, ♊ Gemini, ♋ Cancer, ♌ Leo, ♍  
Virgo, ♎ Libra, ♏ Scorpio, ♐ Sagittarius, ♑ Capricornus  
♒ Aquarius, ♓ Pisces.

♈ Dragons-head. ♏ Dragons-tail. ♄ Coniunction or  
change \* Sextile. ☐ Quartile or quarter, ☿ Trine, ☉ O-  
pposition or full.

So that desiring to know how the Moone or any other Pla-  
net is configured or affected at any time, do but seek the day of  
the month, and right ouer against the same in the column of  
aspects you haue your desire, noting alwayes that the letter a  
adoption signifieth the forenoone and p the afternoone of the  
same day.

## To the Reader

**A**S I would not wish thee (*curteous Reader*) to be too superstitious in giuing more credit to Astrolog: call predictions then is fit & convenient, (seeing the Almighty can at an instant (Exod. 4. 2. 3. & 7. 3. 4. & 14. 21. Iosua. 3. 7 & 10. 12. 13. 2. Reg. 4. 4. 34. & 20. 9. 11. Ilay. 38. 8. Mt. 27. 47. Mar. 16. 17.) alter & inuert the whole courſe of Nature: ſelte: ſo would I not haue thee (with the Hamptonian doctōr) to vilpend or raue againſt that worſhie Art, or the profeſſors thereof in general, conſidering, that as God made nothing in vaine, ſo much leſſe the multitude of thoſe glorious Orbs, the leaſt fixed whereof, is proued by inſallible demonſtration, to be about 18. times greater then the whole earth we liue vpon, neither were they made for faſhion ſake, or to be gazed on only, for doubtles as they are thoſe ſubjects to whom Influence is firſt deriued, ſo are they the very Charactery, registry, & Treafurie wherein the eternall Architect (ſalued miraculous inſtrument) hath ingrauen, inrolled and laid vp (as it were) the meanes of his inevitable decree, for prooffe whereof, as alſo for the neceſſitie & certainty of their influencial power, beſides daily experience, I referre thee to theſe paſſages of holy writ, (Gene. 1. 17. 18. Exo. 9. 18. & 10. 19 & 14. 21. Deu. 4. 19. & 28. 12. & 33. 14. Iolu. 10. 11. Ind. 5. 4. 20. Iob. 28. 26. & 38. 22. 23. 31 38. Plal. 19. 4. Holca 2. 21. 23.) and to theſe Authors verdicts following, Phil: Melancthon, Mich: Scotus, Fran: Iunctinus, Hier: Wolfius, Io: chi: Hellerus, Iovi: Pontanus, Ioſfran: Ofuſius, Geru: Marſtelerus, Mercur: Moſſhamius, Henr: Ranzonus, Gaſpa: Pencerus, Rod: Goglenius, Caſpar: Bartholinus, &c. as alſo to the learned Treatiſe of our worthy countriman S. Chriſtopher Heydon, which (I thought) had giuen the world ſufficient ſatiſfaction herein long ago: Only this great D. (Chamber-like oppoſing himſelte) inſulteth ouer all Astrologers in general, branding them with impoſture deceit, iugling, and many other ſoule mouth'd tearmes, as though the Art were meere idle, and grounded vpon no rational Theorems in the world. But I

## To the Reader.

had thought that *ingenuus didicisse fideliter artes*, would haue moued this D. with learned Melisthō to confesse, that *Astrologiā, si quis ad Physicā prudēter referre nō erit, graues & euidentēs habere rationēs*. And with Scotus, 2. Sent. dist. 14. q. 3. to acknowledge that *Conueniens est & necessariū, quōd bonus Medicus habeat Scientiam Astronomicā, possit enim propinare aliquo tēpore Medicinā quæ interficeret, tēpore alio liberaret*. And the rather, because his own Archflamine Hipocrates giueth generall warning; *quod quisq; caueat à medico ignorante Astrologiā, quia stellæ confundūt, & alterant 4. elementa, confundūt & 4. humores, &c.* And Galen, lib. Epid. 1. in one place affirmeth, *necessariū esse cuiusq; perspexisse Syderis cursus & occasus: & insua Mathematic: saith, that figura geniture accuratè, dīquīrenda est, ut de morbi qualitate indicemus*.

And for mine owne part, I am of opinion with these Authors, (*viz*) Ioan: Ganius, Marfil. Picinus, Petr: Apponē. Io. Hasturtus: Luc. Bellantius; Hier: Fracastorius, Gualt. Ryffe, Cor: Gēna, Cor: Schlander, Tho: Boderius, Io. Ferlius, Frid. Chrilogenus, Frid. Boneuent. Fran: Valesius, Hier. Cardanus, Petr. Forestus, Hier. Rubeus, Luc: Gauricus, and many others; that those Phisitions which are viterly ignorant of Astrologie, want an eye (as it were,) especially when they go about to discouer and cure such implicit diseases as range now adaies. It is strange also to see how this D. (Casmannus-like, going about to extenuate the heauens influence) would haue it graunted as vncontrouersed, that tall men haue a libertie and freedome of will, vnto any Morall, Naturall, Ciuill, or politicke good: True it is, that all animall creatures whatsoeuer, haue libertie and freedome of will to vse thole naturall Faculties and organically powers wherewith they are endowed; But how farre this will can extende it selfe,

## To the Reader.

it selfe, and whether it be in mans power to effect or will any good thing at all, without the especiall and preuenting grace of Almighty GOD, I leaue to the censure of the Reuerend Theologists, and to the probate of these passages of sacred Caball following; Gen. 6. 5. & 8. 21. Prov. 16. 9. & 20. 24. & 21. 1. Ierem. 10. 23. Iohn. 7. 24. Rom. 7. 19. and 9. 16. 1. Corr. 3. 7. & 4. 7. & 15. 10. 2. Corr. 3. 5. Gallat. 5. 17. Phill. 2. 13. Ioan. 1. 17. &c. Nay surely we are so farre depriv'd of power in this kind, that neither the wickedest man liuing, nor the diuell himselfe can effect any mischiefe, or afflict any person further then GOD *ab anserno*, hath limited & decreed, witness, 1. Sam. 2. 9. Iud. 16. 20. Iob. 1. 12. Iohn 19. 11. therefore how iniuriously he hath delt against Astrologers, let the world iudge. As for his canuall of Empericks, Methodians, &c. I leaue him to the randon of his owne reason, only noting by the way that as the knowledge of physicke came first by empericall meanes, so there be many learned DD. would make much of a good experiment, that coniecture by Urine is many times intallible, and that God blesteth by lesser meanes sometimes, when greater faileth. And so submitting my selfe to the wisest censure, I rest

At thy friendly dispose,

*Tho: Bretmor.*

*Of the Eclipses happening this yeere. 1614.*

**T**ell us this yeere will this darke starre of Mortalitie, and twise also with her neighboring Diue the moone be partilly depriued of day-light, by th'interposition of the ones grasse Systeme. Twixt the others and the Sunne.

The first Eclipse (which will be of the Earth or Sunne, choose you whether) will happen the 29. of March, at 2. a clock and 40. minutes after midnight: At which time the East Indians, and other South-easterne inhabitants shall see the Sun almost totally darkened, but in regard it neither fallth out above our Horizon, nor concerns our Climate. I purposely omit to speake any further thereof. The second Eclipse will be of the Moone; and that will appeare the 14. of April, at 4. a clock and 28. minutes in the morning: at which instant 6. points of the Northerne moytie of the Moons bodie wilbe utterly depriued of Sun-shine. The Earth beginning to stand in the Moones light, 15. minutes past 3. & continuing therein more and lesse, vntill 5. a clocke 41. minutes, will cause the durance thereof to be 2. houres 26. minutes: so that we in England shall not see much above halfe thereof, in regard of the Sun-rise, and moones discession; but the Virginians & Americans shal behold the whole Phenomene. The effects will begin to come in force the 1. of Aprill 1615. and continue vntill the 12. of June following. vntill which yeere I suspend all further iudgement.

The third Eclipse will be of the Earth, the 23. of September

her 12. minutes after midday, at which instant the Indiapha-  
nous and grosse Systeme of the moone will Eclipse or hide 6.  
points (very neare) of the southerne moyle of the Sunes sole-  
figning beams from our sight, she will begin to touch his south-  
west limbe, 3. quarters of an houre before noone, and continue  
vntill 9. minutes after one, before they be fully separated from  
vnder his splendent rayes: so that the whole durance of this E-  
clipse will be one houre and 55. minutes. Of whose effects be-  
ginning to come in force the last of March 1615. and conti-  
nuing vntill the last of February, 1617. I spare to speake any  
more at this time. The fourth and last Eclipse will be of the  
Moone, the 7. of October, at 3. a clocke and 37. minutes in the  
afternoone, at which instant the Grecians, Asians. and all other  
Easterly inhabitants shal behold 5. points, or almost one halfe  
of her Superficies, depriued of Sun-shine, like wee in England,  
and other Easterly dwellers, shal not see any part thereof (un-  
les parallaxically) in regard she will not climb above our Ho-  
rizon, before the full consummation thereof.

Of the foure Quarters of the yeare:  
And first of Winter.

A **Q**uapacious Dybe Peripherically reuolued vpon the Axis,  
inclined to the plane of a luminous, impatible objecteth his  
surface to Light and darknes, and at greatest inclination with  
greatest difference. But this our Indiaphanous Globe, mo-  
uing to the Sun, subiecteth his generall inhabitants to like con-  
ditions, and being the 1. of December, 1613. at 2. a clocke,  
and 29. minutes in the afternoone, in his greatest reclinacion  
fro the plane thereof, inuolued this our Southern Hemisphere,  
in greatest portion of shadow, and least scantlet of Sun-shine,  
or vulgarly the Sonne hauing (by his supposed motion) attai-  
ned the point of his greatest declination to the South, from  
our Zenith, (limited with the Solstitiall colure or first scruple  
of the 10. dodecatemory, commonly called Capricorn) inabe  
at that time the shortest day and longest night with vs, usually

## A Prognostication,

accounted for the beginning of the first quarter of the Astronomical yeere, called Winter.

Touching the disposition of the season, I gather it will prove more stormie and wet then wished, yet with remission of colde untill mid-January, when both Snow and frosts will pinch the poore Cattell and Plants of the earth.

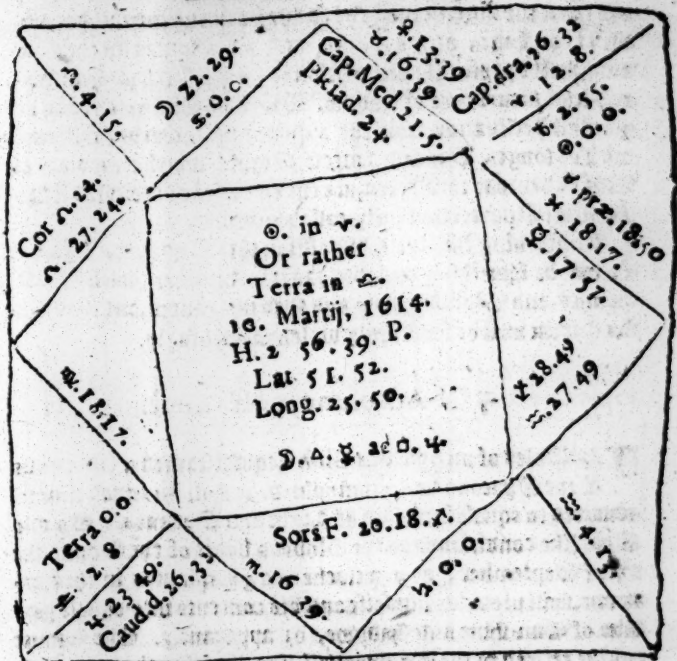

What manner of diseases shall raigne this Quarter, a season so qualified is Argument insufficient to those Qui Physicam cum Astrologia conferre noverint, to the rest, further information is fruitles.

### ¶ Of the Spring.

A **Q**uopacous Obe, circūvolued to a luminous æquidistanced the poles of his revolution, intercurrerh equall Arch's of Light and darknes. But the opacous starre of our inhabitance is affected to the perennall and immovable Globe of light, the 10. of March at 2. a clocke, 56. minutes, and 39. seconds in the afternoone shall obiect himselfe, & contents in equall time to equall quantitie of shadow and Sun-shine: 01, The Sun, (to our apparante) placed in the last point of the worlds æquibrij, will at that moment make the day and night all the long, all this world over, except some parts (for the excessse of the Shines greatnes about the Earths, being continuall day,) which habitues either way imagined, give beginning to the second quarter of the Astronomical yeere, usually called the Spring.

This Quarter is like to prove very cold and nipping at the beginning, but losrie and boystrous towards the ending.

The diseases springing from a Spring of this condition, every good Astrophysicall Scholler may easily argue by the examination of this little Scheme, representing the configuration and posture of the Prime-mouing-mundane bodies, at the moment of this Quarters entrance, usually taken for the Annuall Revolution of this Worlds creation: of the vulgare called the entrance of the Sunne into Aries, but indeed is the Earths scite in Libra.

The Earth exposed vnto Falciger,  
 And SOL conioyned to his fatall beames;  
 May giue vs warning of some future jarre,  
 Of Famine, Sicknes, or as bad extreames;  
 The cause's apparant, what th' effects will proue,  
 I leaue to HIM that guides and rules aboue.

### ¶ Of Summer.

If the Poles of an opacous Dybs-circumvolution be reclined  
 from the poynts of Radiall lines contingut the Periph-rie,  
 wherein they both ly, that Dybs shall be vnequally obuolued  
 to the luminous globe, whence thole lineall Rayes are deriued:  
 But the Poles of this worlds circumvolution, greater recli-

## A Prognostication,

and from the dimention of the Shies contugenticall beames, the 11. of June, at 7 a clocke, and 12. minutes in the Evening, shall oppose this our portion to largest Arch of Sunshine, and least incurance of shadow. 2. The Sunne scited in his greatest declination from the æquator northwards, will cause with vs longest Day and shortest Night: which temporary effects either way considered, are the entrance of the third Astronomicall Quarter, vulgarly called Summer.

Concerning the Ayres disposition this Quarter, I gather (it will be something variable,) as faire weather, with Rayle, stormes, and Thunder, now and then intermixed, and the diseases therein will be something violent accordingly.

## ¶ Of Autumne, or Haruest.

The Poles of an opacous Globe, equidistanced a lundrous if the Opacous be circinvolved, it shall in equall time be aduerted to equall incursion of Light and Darknes. So our Globe like conditioned to the Globous bodie of the Sunne, the 13. of September, at 9. a clocke and 38. minutes in the forenoon, shall prouolve himselfe and his contents into equall portion of Sunshine and shadowe, or apparantly. The Sunne againe retired to the Equinoctiall line, limiting the beginning of the 7. Dodecatemorie, vñally called Libra, shall make the day and night of a like length throughout the world, salued (as before said) some places neere adiacent to each Pole: which habitude whether way concerned, is accompted the beginning of the last Quarter of the years Astronomicall, commonly called Autumne or Haruest.

Touthing Weatherage this quarter, it is like to be fraught with many stouny gusses of Rayle and Rayne, as by the daily disposition hereafter may appeare: And the diseases chiefly haunting the same, will be Feuers and Fluxes of strange nature and course.

# Bretnor, 1614.

¶ A more particular prediction of the Ayres daily disposition, the places of the Planets, and their Sympathicall effects.

## ¶ Ianuarie.

Day.	☉.	☿.	M.H.	☊.	♊.	♋.	♌.	♍.	♎.	♏.	♐.	♑.	♒.

The 1, 2, 3, and 4, dayes disposed to moisture: the 5, 6, and 7, more clare and Sun. shining.

First quarter the 8. day at 2. a clocke and 12 minutes in the afternoone: and the 9, 10, and 11 dayes, windy and colde, the 12, 13, and 14. stormy now and then.

Full moone the 15 day, halfe an houre past 7. at night: and the 16, 17, and 18 dayes, some stormy gulls: the 19, 20, and 21, more seasonable.

Last quarter the 22 day, 3, minutes past 11, in the forenoone: and the 23, 24, and 25, dayes, some blais a breeding: the 26, 27, and 28, not much unlike.

New moone the 30 day, at 2 a clocke and 40 minutes in the morning: and the 31, windy dayes.

## Good dayes,

4. Open harted,
- 6, 5, by plaine plodding,
- 9, all thou demandest,
- 12, through the byers,
- 14, both sweet and sower,
- 17, 18, not easily acted,
- 19, first come, first serued,

## Euill dayes.

- 1, 2, 3, To no great purpose
- 5, 7, but chaunce medley,
- 10, 11, it is not for thee
- 13, waste no labour,
- 15, 16, in bitter dispaire,
- 20, 21, 22, 23, a back recko.
- 26, 28, no good meaning (neg

# Bretnor, 1614.

24, 25, ready tempered,  
27, abide the hunte.

29, 30, 31, out of all hope,

## ¶ Aprill.

The 1. 2. 3. and 4 some thing loftie: the 5 and 6 overcast.  
First quarter the 7. day 33 minutes after 6, in the morning:  
and the 8. 9. & 10. dayes, Sun-shining: the 11. 12. and 13. windy  
and waivering. Full D the 14. day at 4. a clocke & 28. minutes  
in the morning: and the 15. and 16. dayes, disposed to moisture:  
the 17. 18. and 19. loftie dayes. Last quarter the 20 day at 8.  
a clocke 19. minuts at night: and the 21. 22. and 23. cleare for  
the most part: the 24. 25. 26. and 27. some Aprill showers.

New moone the 28 day, one minute past 7, at night: and the  
29, and 30 dayes open weather.

### Good dayes.

4. 6. Well resolved,  
9. 10. with some difficultie,  
16. 18. sleepe not thy Tyde:  
19. 20. nothing impossible,  
21. 22. scarce his words mai-  
23. be not dismayde, (Her,  
30. it will fadge well.

### Euill dayes.

1. 2. 3. shrunke in the wetting,  
5. 7. a lash at last,  
8. 10. but in a hard case,  
11. 12. false harted,  
13. 14. 15 vaine hopes,  
17. a crabbed Earle,  
24. 25. no redemption,

# Bretnor, 1614.

26. 27. 29. back again's bed  
28. close comeyance. (the)

First quarter the 6. day 5. minuts past 7. at night: & the 7. 8. & 9.  
10 dayes, some thing lofty: the 11. & 12. disposed to Thunder.  
Full Moone the 13. day full at noone: and the 14. and 15. reasonable weather: the 16. 17. and 18. dropping now and then.

Last quarter the 20. day, 18 minuts after 7. in the morning:  
and the 21. 22. and 23. windy dayes: the 24. and 25. disposed to rain: the 26. and 27. cleare dayes.

New moone the 28 day, at 10 a clocke, and 36 minuts in the forenoone: and the 29. 30. and 31. windy and cleare.

## Good dayes.

1. 3. No pleasure without  
5 in the way to winne, (paine  
7, 8, follows and feare)  
14. all he can doe.  
17, 18, a faire promise,  
22. he may doe much,

## Evill dayes.

2. Exceeding dilinall.  
4. 11. 12. as good sit still,  
6. 9. 10. in cumber and care,  
13. it boots not to heagge  
15, 16. cold comfort,  
19, 20, 21. at a stand,

## A Prognostication,

25, Slippe no advantage,  
27, 29, by weight and maine.

23. 24. something desperate,  
26. 28. at his wits end,  
30 31. forward and feeble.

June.
